SPACE HEATERS (FOR PANEL BOARD)

‘GIRISHEGO’ Range of Space Heaters are ideal for prevention of condensation, corrosion. Leakage currents in L.T. & H.T. Switchgear panel boards / electronic instruments & panels etc.

In **Space heaters with perforated body** the specially developed design incorporates a stainless steel sheathed cartridge heating element in perforated sheet metal enclosure. A black powder coated finish ensures rapid heat dissipation. A 2 x 2.5 mm porcelain terminal block is provided for electrical connection.

In **Box type Space heaters** the specially developed design incorporates a high quality Mica insulated Kanthal heating element in aluminum enclosure. A 2 x 2.5 mm terminal block is provided for electrical connection. Two fixing holes are provided at a center distance of 180mm.

In **Aluminium space Heaters** the Body is made of anodized heat sink grade extruded aluminium for Fast dissipation of heat into air. High quality resistance heating element is insulated with mica for optimum insulation even in extreme humid conditions. Resistance element and insulation are held tight in between aluminium parts and squeezed for quick and uniform heating. Heater can withstand much higher degree of mechanical shock and vibration. Elevated body provides for easy passage of heat directly to air, without heating panel body.

Installation can be done in vertical or horizontal position although horizontal mounting is preferred. Distance from surface of panel should be at least 10mm. and distance from plastic parts should be at least 50mm.

Each heater is tested for following specific tests: 1) High Voltage Test At 2Kv/1Min

2) Insulation Resistance > 10 Mega Ohms. 3) Power Rating within ± 5%.

STEM TYPE THERMOSTATS & THERMAL CUT-OUT

AS PER IS/IEC 60730-2-9:2011 SPECIFICATIONS (OLD IS-3017).

‘GIRISHEGO’ Range of stem type thermostat are designed to meet a variety of requirements for domestic, industrial and commercial heating systems. Our thermostats come in different shapes & model to suit the individual requirement of application and economy. These are suitable for instant and storage type water heaters, switchgear & panel boards, water and oil baths, moulds, sterilisers, ovens, boilers and other domestic & industrial heating appliances.

PRINCIPLE OF OPERATION: With temp rise, the principle of differential expansion of brass tube and a Nickel/Iron (inver) Rod is used to actuate a highly accurate snap action micro gap switch located in the head which makes it keep the temperature of liquid or solid, constan within the differential i.e. A single pole, single throw, normally closed circuit breaks (opens) on rise of temperature.

CONSTRUCTION: The micro gap switch assembly is mounted on a heat resistant base, with rigid brass pillar terminals. Heavy duty Ag cdo contacts are provided for long trouble free life. A thermoplastic/thermosetting cover with clear and precise graduations is provided along with a setting knob. A spring steel clip is provided for snap on fixing of Thermostat. It can be fixed in any position. Thermostats are available in three standard stem lengths of 7" (175 mm), 11" (275 mm), 18" (450 mm) with tube diameter of 5/16" (8 mm)

AVAILABLE ON REQUEST:1) Smaller stem lengths of 4½" (115 mm) & 5" (125 mm). 2) Normally Open Contacts. (N.O.C.). 3) Preset at fixed temperature. 4) Higher insulation resistance & H.V. for switchgear and panel boards. 5) 20 amp. Thermostats.
